

## 0 Nahuelbuta weather station

The data file contains data from a weather station in Nahuelbuta.

- Read in the CSV file "data0\_no\_time.csv". (use `np.loadtxt()` and `delimiter=","`)
- Write a function that filters out the negative values (-9999.0) from the data.
- Plot the first (air temperature in deg C) and second column (solar radiation  $\frac{Watt}{m^2}$ ) in two separate plots.
- The time information is missing, try to figure out from what time period the data is.
